-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 08 December 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-69 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-12, 14-27, 31-35, 39-44, 46-49, 51-55, 59, 61 and 62 is/are rejected.
- 7) ☒ Claim(s) 13, 28-30, 36-38, 45, 50, 56-58, 60 and 63-69 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 08 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

*Detailed Action*

*Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-12, 14-27, 31-35, 39-44, 46-49, 51-55, 59, 61-62 are rejected under 35 U.S.C. 102(e) as being anticipated by Laroia et al. (US Publication 2005/0073973).

Regarding claim 1, Laroia discloses a method for providing wireless communication (multi-sector, multi-cell communications system, see paragraph 0017 and Fig. 1), said method comprising:

providing a plurality of frequency channels (different communication channels, see paragraph 0026) in each of a plurality of portions (see sectors 1, 2, 3, 4, Fig. 1) of a service area (see element 100, Fig. 1), wherein a same frequency channel of said plurality of frequency channels is provided for use in two or more adjacent portions of said service area (frequency reuse is achieved in all sectors, see entire paragraphs 0024, 0025); and

mitigating interference by making particular channels of said plurality of channels available for use by network nodes disposed in said portions of said service area based upon dynamically determined communication link metrics (the classification of types of information and types of channels may be flexible and may be changed dynamically based on the

system overall loading and user required data rate in order to provide different tolerable interference, see paragraphs 0009 and 0033).

Regarding claim 2, Laroia discloses the method of claim 1, wherein said mitigating interference comprises:

selecting a channel from said plurality of channels for communication with a particular network node (network node 136, Fig. 1) using adaptive dynamic channel selection to identify a channel having a best communication attribute with respect to said network node (types of channels may be flexible and may be changed dynamically based on the system overall loading and user required data rate in order to provide different tolerable interference, see paragraphs 0009 and 0033).

Regarding claim 3, Laroia discloses the method of claim 1, wherein said mitigating interference further comprises:

selecting a time division of said particular channels for use in communicating with particular network nodes based upon said dynamically determined communication link metrics (each channel segment includes a determined duration of time, see paragraph 004).

Regarding claim 4, Laroia discloses the method of claim 1, wherein said mitigating interference comprises:

selecting at least two channels from said plurality of channels for communication with a particular network node such that transmission of identical data on said at least two channels is provided for post data selection (see paragraphs 0028, 0029, 0041).

Regarding claim 5, Laroia discloses the method of claim 1, wherein said mitigating interference comprises:

selecting at least two channels from said plurality of channels for communication with a particular network node such that data is divided for transmission on said at least two channels for time/frequency coding (two different types of channels for two different types of coding, see paragraphs 0028, 0029).

Regarding claim 6, Laroia discloses the method of claim 1, wherein said mitigating interference comprises:

limiting transmission duty cycles of network nodes with respect to each active channel of said plurality of channels (each channel is scheduled to transmit for a determined period of duration time, see paragraph 0044).

Regarding claim 7, Laroia discloses the method of claim 1, wherein said dynamically determined communication link metrics comprise interference level information (allowable user bit error rate, see paragraph 0033).

Regarding claim 8, Laroia discloses the method of claim 1, wherein said dynamically determined communication link metrics comprise signal propagation level information (user required data rate, see paragraph 0033).

Regarding claim 9, Laroia discloses the method of claim 1, wherein said dynamically determined communication link metrics comprise traffic load information (system overall loading, see paragraph 0033).

Regarding claim 10, Laroia discloses the method of claim 1, wherein said dynamically determined communication link metrics comprise quality of service information (user priority, see paragraph 0033).

Regarding claim 11, Laroia discloses the method of claim 1, further comprising:  
selecting network nodes for simultaneous use of said particular channels as a function of spatial characteristic groupings of said network nodes (selecting nodes EN(1), EN(X), and so on in Fig. 1 for simultaneous use of the first type of communication channel depends on which sector the network nodes are located, see paragraphs 0027, 0028, 0029 and Fig. 1).

Regarding claim 12, Laroia discloses the method of claim 1, wherein said each said frequency channel of said plurality of frequency channels (first type, second type, and third type of communication channels, see paragraphs 0027, 0028, 0029) is provided for use in all portions (all sectors) of said service area (see Fig. 1).

Regarding claim 14, Laroia discloses the method of claim 1, wherein said mitigating interference comprises assigning a different channel of said plurality of channels for use by a particular network node in an uplink and a downlink (see paragraph 0034).

Regarding claim 15, Laroia discloses a wireless communication network system comprising:

a plurality of communication sectors of a service area (see sectors 1, 2, 3, Fig. 1), wherein each communication sector has a plurality of channels associated therewith (each sector has first type, second type and third type of communication channels, see paragraphs 0027, 0028, 0029), and wherein adjacent ones of said communication sectors have at least one same channel of said plurality of channels associated therewith (second type of communication channel will be used where some of the utilized tones allocated to the adjacent sectors to transmit information, see paragraph 0028), and channel management control apparatus (base station 200, see Fig. 2) making particular channels of said plurality of channels available for use by network nodes of said network system as a function of external interference experienced with respect to one or more channels of said plurality of channels (types of information and types of channels to use depends on the allowable user bit error rate, see paragraph 0033).

Regarding claim 16, Laroia discloses the system of claim 15, wherein said channel management control apparatus makes particular time divisions within said particular channels

available for use by said network nodes as a function of dynamically determined channel conditions (see paragraphs 0033 and 0044).

Regarding claim 17, Laroia discloses the system of claim 15, wherein each channel of said plurality of channels is provided in each communication sector of said plurality of communication sectors (see paragraphs 0027, 0028, 0029 and Fig. 1).

Regarding claim 18, Laroia discloses the system of claim 17, wherein said plurality of channels comprise at least 3 frequency channels (three types of communication channels, see paragraphs 0027, 0028, 0029).

Regarding claim 19, Laroia discloses the system of claim 17, wherein said plurality of channels are each within an unlicensed band and subject to external interference.

Regarding claim 20, Laroia discloses the system of claim 15, wherein said plurality of communication sectors comprise communication sectors of a multi-sectored base station (see multi-sectored base station, Fig. 1).

Regarding claim 21, Laroia discloses the system of claim 15, wherein said plurality of communication sectors comprise communication sectors of a plurality of base stations (base stations, see paragraphs 0037 and 0038).

Regarding claim 22, Laroia discloses the system of claim 15, wherein said channel management control apparatus (base station 200) is disposed in a central configuration with respect to a plurality of base stations of said communication network (see paragraphs 0037, 0038 and Fig. 2).

Regarding claim 23, Laroia discloses the system of claim 15, wherein said channel management control apparatus (base station 200) is disposed in a distributed configuration with respect to a plurality of network nodes of said communication network (base station is coupled to other base stations via the I/O interface 208, see paragraphs 0037 and 0038).

Regarding claim 24, Laroia discloses the system of claim 15, wherein said channel management control apparatus makes at least 2 channels of said plurality of channels available for use simultaneously by a particular network node to mitigate said external interference (first type, second type, and third type of communication channels, see paragraphs 0027, 0028, 0029).

Regarding claim 25, Laroia discloses the system of claim 24, wherein said at least 2 channels transmit identical data simultaneously (full tone reuse in the third type of communication channel in each of the adjacent sectors, see paragraph 0029).

Regarding claim 26, Laroia discloses the system of claim 24, wherein said at least 2 channels transmit different portions of an information communication (see paragraph 0020).

Regarding claim 27, Laroia discloses the system of claim 15, wherein said channel management control apparatus makes at least a first channel of said plurality of channels available for use by a particular network node (first type of communication channel is available for use) and makes at least a second channel of said plurality of channels available for use by said particular network node (a second type of communication channel is available for use, see paragraphs 0027, 0028) to mitigate said external interference.

Regarding claim 31, Laroia discloses the system of claim 28, wherein a first tier of said channel scheduling strategy assigns transmission time period opportunities to communication network base station nodes to support groups of subscriber station nodes (see paragraph 0044).

Regarding claim 32, Laroia discloses the system of claim 31, wherein a second tier of said channel scheduling strategy assigns transmission time periods among subscriber station nodes of said groups of subscriber station nodes (scheduler module assigns determined time duration to each channel segment to the wireless terminal, see paragraph 0044).

Regarding claim 33, Laroia discloses the system of claim 15, wherein said channel management control apparatus makes a different channel of said plurality of channels available for use by a particular network node in an uplink and a downlink (see paragraphs 0027, 0028, 0029 and 0034).

Regarding claim 34, Laroia discloses a method for providing wireless communication, said method comprising:

providing a plurality of frequency channels (different communication channels, see paragraph 0026) in each of a plurality of portions (see sectors 1, 2, 3, 4, Fig. 1) of a service area (see element 100, Fig. 1), wherein a same frequency channel of said plurality of frequency channels is provided for use in two or more adjacent portions of said service area (frequency reuse is achieved in all sectors, see entire paragraphs 0024, 0025);

activating said first frequency channel in parallel with respect to said two or more adjacent portions of said service area by selecting network nodes for parallel communication links as a function of spatial characteristic groupings (selecting nodes EN(1), EN(X), and so on in Fig. 1 for simultaneous use of the first type of communication channel depends on which sector the network nodes are located, see paragraphs 0027, 0028, 0029 and Fig. 1).

Regarding claim 35, Laroia discloses the method of claim 34, further comprising:

determining a spatial signature (sector ID, see paragraph 0039) for network nodes operable in said service area (identifying the sector the wireless terminals belong to), wherein said network nodes (wireless terminals) selected for parallel communication links have a compatible spatial signature (all wireless terminals belonging to the same sector have the same sector ID, see paragraph 0039).

Regarding claim 39, Laroia discloses the method of claim 35, wherein said activating said first frequency channel (second type of communication channel, see paragraph 0028) comprises:

assigning transmission time period opportunities of said first frequency channel (second type of communication channel, see paragraph 0028) to groups network nodes as a function of said spatial signatures (assigning a determined time duration for each channel segment of each sector, see paragraph 0044).

Regarding claim 40, Laroia discloses the method of claim 34, wherein said activating said first frequency channel (second type of communication channel, see paragraph 0028) further comprises:

scheduling individual time slots of said first frequency channel transmission time period opportunities to particular network nodes as a function of communication demand associated with said network nodes (see paragraph 0044).

Regarding claim 41, Laroia discloses the method of claim 34, further comprising:  
dynamically changing a frequency channel utilized by a particular network node based upon a determined channel quality metric (see paragraph 0033).

Regarding claim 42, Laroia discloses the method of claim 34, further comprising:  
providing simultaneous transmission of a same information content using two frequency channels (see paragraph 0031); and

selecting a valid information content for use from said same information content transmitted using said two frequency channels (see paragraph 0041).

Regarding claim 43, Laroia discloses the method of claim 34, further comprising:  
providing simultaneous transmission of portions of information content using two frequency channels (see paragraph 0031); and

deriving said information content by combining said portions of information content transmitted using said two frequency channels (see paragraph 0041).

Regarding claim 44, Laroia discloses the method of claim 34, wherein a second frequency channel of said plurality of frequency channels is provided in each of said two or more adjacent portions of said service area (two or more sectors, see paragraph 0027, 0028, 0029 and Fig. 1).

Regarding claim 46, Laroia discloses a wireless broadband access network system comprising:

a base station having a plurality of sectors (see Fig. 1), wherein each of a plurality of channels is associated with each sector of said plurality of sectors (see paragraphs 0027, 0028, 0029); and

a scheduler (see scheduler module 226, Fig. 2) in communication with said base station (see base station 200, Fig. 2) and providing information as to channels of said plurality of

channels which are to be activated in parallel with respect to assigned transmission time period opportunities (see paragraph 0044).

Regarding claim 47, Laroia discloses the system of claim 46, further comprising:

a plurality of base stations having a plurality of sectors (base stations 106 having sectors 1, 2 and 3 , see paragraphs 0037 and Fig. 1), wherein each of said plurality of channels is associated with each sector of said plurality of sectors (three types of communication channels are associated with each sector, see paragraphs 0027, 0028, 0029), and wherein said scheduler is in communication with said plurality of base stations (see scheduler module 226 of each base station, see Fig. 2) providing information as to channels of said plurality of channels which are to be activated in parallel with respect to assigned transmission time period opportunities (scheduler module 226 schedules uplink and downlink channels within each sector and each channel segment includes one or more logical tones for a determined duration of time, see paragraph 0044).

Regarding claim 48, Laroia discloses the system of claim 46, wherein said base station comprises:

a plurality of wireless nodes, wherein a wireless node of said plurality of wireless nodes is associated with a sector of said plurality of sectors (a plurality of wireless terminals and end nodes in each sector, see paragraph 0036 and Fig. 1).

Regarding claim 49, Laroia discloses the system of claim 48, wherein said wireless nodes comprise:

an access point (base station 106, Fig. 1) operable according to an unlicensed wireless spectrum protocol (CDMA, see paragraph 0079).

Regarding claim 51, Laroia discloses the system of claim 50, wherein said groups of subscriber stations comprise subscriber stations having similar spatial attributes (wireless terminals 144 and 146 are enclosed within the same sector, see Fig. 1).

Regarding claim 52, Laroia discloses a wireless communication system comprising:  
a plurality of radios (a plurality of antennas, see Fig. 2) disposed to provide wireless communication links with respect to different portions of a service area (a plurality of antenna are sectorized to transmit and receive for each sector, see Fig. 2), wherein at least a first set of radios (antennas for a given sector) of said plurality of radios disposed to provide wireless communication links with respect to said different portions of the service area utilize a first frequency channel (uses a second type of communication channel, see paragraph 0027); and  
a vector array setting forth a plurality of combinations of radios of said first set of radios (a given sector that comprises a combination of a given sectorized transmitting and receiving antennas, see Fig. 1) that are activated in parallel to provide simultaneous communication links with respect to subscriber stations operable in said service area (first type, second type, third type of communication channels can be transmitted simultaneously, see paragraph 0031).

Regarding claim 53, Laroia discloses the system of claim 52, wherein said first set of radios (sectorized antennas, see Fig. 2) comprise a radio of each sector of a multi-sectorized base station (a sectorized antenna of each sector of the multi-sectorized base station 106, see Fig. 1).

Regarding claim 54, Laroia discloses the system of claim 52, wherein said first set of radios (sectorized antennas, see Fig. 2) comprise a radio of adjacent base stations (see paragraph 0037, 0038).

Regarding claim 55, Laroia discloses the system of claim 52, further comprising:  
a plurality of spatial signature vectors (see sectors 1, 2, 3, Fig. 1) setting forth information for each one of said subscriber stations with respect to said first set of radios (different communication channels are used in each sector, see paragraphs 0027, 0028, 0029), wherein each of said subscriber stations (each wireless terminal) has a spatial signature vector of said plurality of spatial signature vectors associated therewith (each wireless terminal is associated with a particular sector, see Fig. 1).

Regarding claim 59, Laroia discloses the system of claim 55, further comprising:  
a scheduler operable to select, as a function of said spatial signature vectors, (scheduler module 226 allocates downlink and uplink channel segments to the wireless terminals with each sector, see paragraph 0044) a vector from said vector array (scheduler modules selects a channel segment from a sector) identifying a combination of radios for use (a particular sector identifies a

particular antenna for use at the base station, see Fig. 2) in providing communication links to ones of said subscriber stations (in providing communications to the wireless terminals, see paragraph 0044).

Regarding claim 61, Laroia discloses the system of claim 59, wherein said scheduler is further operable to assign particular time slots available (scheduler module assigns different time duration for each channel segment, see paragraph 0044) using said combination of radios (using sectorized antennas, see Fig. 2) to particular subscriber stations (sectorized antennas for a particular sector that comprises particular wireless terminals, see Fig. 2).

Regarding claim 62, Laroia discloses the system of claim 52, wherein at least a second group of radios of said plurality of radios (a plurality of antennas) disposed to provide wireless communication links with respect to said different portions of the service area (provide transmission and reception for each a particular sector, see Fig. 2) utilize a second frequency channel (third type of communication channel), such that said first and second frequency channels are provided in overlapping portions of the service area (partial overlap of tones in second and third types of communication channels, see paragraphs 0028, 0029).

*Allowable Subject Matter*

2. Claims 13, 28-30, 36-38, 45, 50, 56-58, 60, 63-69 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

In claim 13, the method of claim 1, wherein said plurality of frequency channels are in an unlicensed frequency band.

In claim 28, the system of claim 15, wherein said channel management control apparatus implements an at least 2 tier channel scheduling strategy.

In claim 29, the system of claim 28, wherein a first tier of said channel scheduling strategy is executed centrally and a second tier of said channel scheduling strategy is executed distributedly.

In claim 30, the system of claim 28, wherein said first tier of said channel scheduling strategy updates channel assignments at a relatively slow pace and wherein said second tier of said channel scheduling strategy updates channel assignments in real-time.

In claim 36, the method of claim 35, further comprising:  
determining compatibility of said spatial signatures by correspondence to a schedule of active radios vector.

In claim 37, the method of claim 36, further comprising:

weighting a plurality of schedule of active radios vectors such that a heaviest weighted schedule of active radios vectors provides for a highest number of parallel communication links, wherein said plurality of schedule of active radios vectors comprises said schedule of active radios vector.

In claim 38, the method of claim 37, further comprising:

selecting a schedule of active radios vector for grouping network nodes having a compatible spatial signature into is based upon a schedule of active radios vector having a highest weight.

In claim 45, the method of claim 44, wherein said first and second frequency channels are a part of an unlicensed band of frequency channels.

In claim 50, the system of claim 46, wherein said scheduler comprises:

a two tiered scheduler, wherein a first tier of said scheduler assigns time per group of subscriber stations and a second tier of said scheduler assigns individual time slots within said assigned time to particular subscriber stations of said group of subscriber stations.

In claim 56, the system of claim 55, wherein said spatial signature vectors provide information with respect to a combination of radios of said first set of radios that are

acceptable to be activated in parallel when a radio of said first set of radios is in information communication with a corresponding one of said subscriber stations.

In claim 57, the system of claim 55, wherein vectors of said vector array are assigned a weight corresponding to a number of radios that are activated in parallel associated therewith.

In claim 58, the system of claim 57, wherein each said subscriber station is identified with a vector of said vector array having a combination of radios of said first set of radios compatible with the subscriber station's spatial signature vector based upon said weighting.

In claim 60, the system of claim 59, wherein said scheduler updates said vector array to indicate said vector is active.

In claim 63, the system of claim 62, further comprising:  
a channel selection controller dynamically selecting a frequency channel of said first and second frequency channels having a highest channel quality metric associated therewith for use in communicating with a subscriber station.

In claim 64, the system of claim 62, further comprising:  
a controller selecting a valid frame from frames simultaneously transmitted using said first and second frequency channels.

In claim 65, the system of claim 62, further comprising:  
a controller deinterleaving a frame from data simultaneously transmitted using said first and second frequency channels.

In claim 66, the system of claim 52, wherein said plurality of radios comprise 802.11 compliant access points.

In claim 67, the system of claim 66, wherein a medium access control layer utilized with respect to communications via said first frequency channel is not 802.11 compliant.

In claim 68, the system of claim 66, wherein a medium access control layer utilized with respect to communications via said first frequency channel is adapted to facilitate synchronous data communication.

In claim 69, the system of claim 66, wherein said first frequency channel is in an unlicensed frequency band.

*Conclusion*
